Researchers are conducting a study to examine the use of mindfulness-based stress reduction (MBSR) in Veterans who suffer from chronic lower back pain. The purpose of this study is to learn how the brain works in response to MBSR. Ultimately, results from this study will be used to improve chronic back pain treatment.

Veterans, 20-70 years old, who suffer from chronic lower back pain are invited to participate in a research study at the Providence VA Medical Center.

**Study Involvement:**
- 2 MRI scans
- 2 EEG recordings
- 8 Weeks of MBSR training
- You will receive up to $330 in gift cards for your time and effort
